Evaluations.xls"

## ALTA Maths Evaluation

What would you say were the main strengths of Alta Maths for Schools

*The fact that the **children can see very readily where the strengths and weaknesses are and do something about it.***  
(P7 Teacher)

*A very useful learning and teaching /assessment tool (if used to its full potential) which **allows the pupil to be in charge of his or her own learning in a non-threatening and enjoyable way.***  
(P7 Teacher)

*I believe that one of the main strengths for Alta maths is at the P7/S1 transition. I think it will come in to its own when 5-14 assessments are no more. **Alta would allow for a standardised assessment for pupils entering secondary education.***  
*I also feel that strengths lie in the **instant feedback to pupils**, informing them of their own progress and encouraging them to become more independent learners.*  
(Primary ICT Tutor)

What would you like to see improved in the Alta Maths for Schools system

*I am quite satisfied with what is on offer **and plan to continue using it***  
(P7 Teacher)

*To me, the biggest improvement must be adequate help and support immediately if things go wrong on the technical side. Perhaps assistance remotely to the pupil's computer?*  
(P7 Teacher)

*...I intend to use this with my **1<sup>st</sup> and 2<sup>nd</sup> Year classes next session...***  
(Secondary Teacher)

Other

*The children all enjoyed using ALTA and liked the fact that they could be tested on specific areas of maths. I didn't use the information as effectively as I could or should have and next year, assuming **(and hoping!)** we still have ALTA would want to set this up in August and use straight away and get into the habit of incorporating this into my maths work programmes. **I felt this was very much a learning year for me and am keen to start using it much more effectively than I did this year.***
